1. Introduction

Most people are now more aware of the animals because of the internet, the increase number of stray, abandoned and surrendered pets is now a growing concern for animal welfare organizations all around the world. Most adoption process especially in the Philippines rely on traditional adoption process which is often challenging due to lengthy paperwork, limited outreach, geographical constraints making it hard for adopters to find their suitable pets. Some as well use the platform Facebook to adopt or rehome their pets which is risky because some people might not be a responsible pet owner. Various animal rescuers, pet owners, and advocates had a hard time to get along with responsible adopters because of not having an efficient, centralized, and accessible platform to communicate. To address this challenges, The Hope4Pets Online Pet Adoption and Rehoming System is built to provide solution for the challenges faced by individuals and organizations in finding a safe, comfortable and forever home for animals who are in need of help. The goal of the system is to organize a user-friendly interface, safe environment and accessible platform for pet owners/rescuers and adopters to interact with each other and successfully adopt or rehome their pets.

1.1 Purpose

The purpose of the system is to provide a user, friendly, secured, and centralized online platform that facilitates communication between individuals or organizations who are looking to rehome or adopt pets with responsible adopters. The system aims to make the adoption process of pets easier, safe and more convenient allowing users to create pet profile, search for available pets, and connect with adopters and pet owners. Through employing a digital process, the system seeks to reduce the number of abandoned or homeless animals and increase the adoption rates.

1.2 Intended Audience

- Client: Animal Shelters, Anima Rescue Organizations, Independent pet rescuers, and pet owners seeking a rehoming solution.
- Primary Users:
 1. Pet Owners/Rescuers
 2. Pet Adopters
 3. Individuals or Families
 4. Administrators

1.3 Product Scope

The Hope4Pets System will be a web-based platform accessible on both desktop and mobile browsers, designed to streamline the process of connecting pet owners or rescuers with potential adopters. Its main functions will include user registration and profile management, creation of pet listings with detailed descriptions and photos, a search and filter feature that allows users to find pets based on breed, age, location, type, and history for easier pet discovery, and a verification system to ensure safe adopting process. The platform will also offer a messaging or contact request function to facilitate communication between pet owners and adopters along with administrative tools for monitoring and moderating content as well as verifying users and organization to ensure safety and quality. However, the system will not handle any financial transactions or payments related to adoptions, and all legal aspects of pet ownership transfer, including background checks, will remain the sole responsibility of the involved parties.

1.4 Definitions, Acronyms, and Abbreviations

1. **Adopters** - A person who is looking to adopt a pet.
2. **Rehoming** – The process of finding a pet their forever home.

3. **Pet Profile** – A detailed listing of a pet available for adoption with images, description, and requirements.
4. **Admin/Moderators** – the system administrator who manages the platform and use activities.

2. Overall Description

2.1 User Characteristics

The primary users of the system will be the pet adopters or seekers, owners or rescuers, administrators/moderators, and visitors who will be directly use its operations and functionalities. They may have different skills experience but generally expected to have a basic mobile or computer knowledge.

- **Pet Owners/Rescuers** – Individuals who want to post pets for adoption or rehoming in the pet listing. They should have basic skills in uploading photos, writing short descriptions, as well managing a simple account profile.
- **Pet Adopters/Seekers**– People such as individuals or families who are looking to adopt or rehome pets are expected to have a minimal digital experience including the ability to browse, search, and fill out simple online forms.
- **Platform Administrator/Moderator** – They are the users who has higher technical experience and management skills and are expected to manage the system including dashboards, monitoring user activities, verifying users and listings, and ensuring compliance with platform rules.
- **Animal Shelters Admin** - Shelters and rescue groups that partner with the system to list multiple animals for adoption. They may have staff with varying technical skills, but at minimum, basic knowledge of computer or mobile use is expected.
- **Visitors** – Casual browser who may not register but are curious to explore available pets and are expected to have a little or no technical literacy but could navigate the system through its user-friendly interface.

2.2 Constraints

1. Hardware

- The system requires users to have access to an internet-based device including smartphone, laptop, tablet, or computer.
- The performance of the system may differ depending on the speed of the device's internet connection, storage, or processor.

2. Software

- The system will be web-based which requires a modern web-browser which will affect the compatibility with unsupported or older browsers.
- The system will not be available offline because it is dependent on a stable internet access.
- The system will be response to different screen sizes which ensures usability across various mobile and desktop devices. Thus, minor displays issues may occur on very outdated operating systems/browsers.

3. Regulatory

- The system will follow the policies of local animal welfare though legal documentation for adoption and ownership transfer remains under government or partner organizations' responsibility.
- The system is not allowed to make online payment transactions, guaranteeing in accordance with the financial and security regulations of the Philippines.

4. Standard and Security Limitations

- The system will comply to the data privacy standards including the Philippine Data Privacy Act of 2012 to protect user information.
- The platform will engage both administrator oversight and a built-in verification system to reduce the chance of fraudulent activities or false pet information.

- A technical support will be available hence large-scale issues might still need a while to resolve.

2.3 Assumptions and Dependencies

1.1.1 Assumptions

- Users needs to have an internet-allowed devices and a stable internet connection.
- Users must have basic digital skills like browsing, filling out online forms and uploading images.
- Administrators and moderators of the system will actively monitor the platform to make user that adoption postings and user interactions is in accordance with the systems standards.
- Users will provide accurate and honest information in relevance to the pet's details and personal data during registration and adoption requests.
- Partner organizations, animal shelters, or rescuers should cooperate in verifying adoption legitimacy and compliance with local regulations.

1.1.2 Dependences

- **Web-Browser** – The system will depend on modern browsers for proper functionality.
- **Operating System** – Operations and functionality of the system will rely on up- to-date versions of Android, iOS, Windows, and macOS to support responsive features.
- **Database and Hosting Service** – The system will be dependent on a reliable server hosting and database systems for data storage, security, and uptime availability.
- **Security Standard:** Accordance with the data privacy laws in the Philippines.

3. Specific Requirements

3.1 Functional Requirements

A. User Registration & Authentication

1. *Users:* Guest, Pet Owners, Animal, Organizations, Rescuers, Pet adopters
2. *Description:* Users can register using email/password only. They complete a profile with full name, email, password and password confirmation.
3. *Inputs:* Name, email, password
4. *Outputs:* Account created, email verification sent.
5. *Success Criteria:* Email verified; ability to reset password; MFA optional for elevated actions.

B. User Profiles & Verification

1. *Users:* Registered Users and Administrator or Moderators
2. *Description:* Profiles display user info, adoption history, verification badges (ID/email/address), references, and organization profiles for shelters.
3. *Inputs:* Verification documents (ID, address proof, org docs).
4. *Outputs:* Verified badge displayed; admin audit trail
5. *Success Criteria:* Verified users clearly marked; verification history tracked

C. Pet Listing Management

1. *Users:* Pet Owner, Animal Shelter Organization
2. *Description:* Create, update, archive pet listings with fields: name, type of animal, breed, age, gender, size, health, vaccination, photos, video, location, and special needs.
3. *Inputs:* Pet data, media uploads, medical records.
4. *Outputs:* Published listing with unique ID, listing history.
5. *Success Criteria:* Listing is searchable, image thumbnails generated, moderated if required.

D. Search, Filter & Map View

1. *Users:* Guest, Pet Owners, Rescuers, Animal Shelters, Pet Adopters
2. *Description:* Advanced search with filters (species, breed, age, size, neutered/spayed, vaccinated, location, keywords); map view with radius-based geolocation.
3. *Inputs:* Search criteria (filters above)
4. *Outputs:* Sorted, paginated results.
5. *Success Criteria:* Results returned quickly; relevant ranking by recency, distance, featured listings

E. Adoption / Rehoming Application Workflow

1. *Users:* Registered User (applicant), Pet Owner/Shelter
2. *Description:* Applicants submit forms (questions, references, home-check availability), upload documents, and schedule meet-and-greet. Owners review, communicate, accept/reject, and mark status (pending, accepted, completed).
3. *Inputs:* Application form responses, documents, preferred dates.
4. *Outputs:* Application record with unique ID; status updates; notifications.
5. *Success Criteria:* Secure storage; full audit trail of decisions; applicants notified of status changes

F. Messaging & Notifications

1. *Users:* All logged-in users, Admin
2. *Description:* In-app messaging (with attachments), email/SMS notifications for events (application status, messages, meetups, donation receipts). Real-time chat or asynchronous messaging with rate limits and abuse controls.
3. *Inputs:* Message content, recipient, attachments.
4. *Outputs:* Delivered messages, read receipts (optional).
5. *Success Criteria:* Messages delivered reliably; spam/abuse filtering in place.

G. Scheduling Meet-and-Greet / Appointments

1. *Users:* Pet Adopters, Pet Owners/Rescuers, Animal Shelters
2. *Description:* Allows adopters and pet owners/shelters to schedule and confirm

meet-and-greet appointments via a calendar interface with reminders and email confirmations. After adoption, the owner/shelter confirms through the system (with email notification), updating the pet's status to "Adopted" and removing it from listings.

3. *Inputs:* Proposed date/time, location (virtual/physical), adoption confirmation.
4. *Outputs:* Confirmed appointment details, reminders, email confirmations, updated adoption status, removed pet profile.
5. *Success Criteria:* Appointments scheduled without conflicts; confirmations sent; adoption status updated correctly; adopted pets hidden from listings.

H. Donations

1. *Users:* Registered User, Shelter Admin, Payment Processor
2. *Description:* Accepts donations exclusively for shelters, rescue organizations, or individuals needing help for their animals. Supports optional premium listings. Integrates with payment gateways (Stripe/PayPal/local PG), issues receipts, and tracks transactions.
3. *Inputs:* Payment details, amount, currency.
4. *Outputs:* Transaction record, receipt email.
5. *Success Criteria:* Secure processing (PCI compliant), no raw card storage, refunds handled, donations restricted to shelters/organizations/animal aid cases.

I. Content Moderation & Reporting

1. *Users:* Admin, Users
2. *Description:* Allows users to flag inappropriate listings or messages. Admins review reports and take actions (remove content, suspend accounts). Automated checks detect prohibited content or images.
3. *Inputs:* User flags, automated detection results.
4. *Outputs:* Moderation queue, action history, notifications of actions taken.
5. *Success Criteria:* Inappropriate content removed promptly, abuse handled

fairly, automated detection works reliably.

J. Admin Dashboard & Reporting

1. *Users:* Platform Admin, Shelter Admin
2. *Description:* Provides Key Performance Indicator or KPIs (active listings, adoption rate, pending applications), user activity metrics, financial reports, audit logs, and export options (CSV/PDF).
3. *Inputs:* Filters, date ranges.
4. *Outputs:* Charts, tables, downloadable reports.
5. *Success Criteria:* Reports generated accurately, data export works correctly, audit logs maintained for accountability.

K. Role-based Access Control (RBAC)

1. *Users:* Platform Admin
2. *Description:* Enables the admin to define and manage roles (e.g., adopter, shelter admin, shelter staff, volunteer) and assign permissions based on responsibilities. Certifies users only access features appropriate to their role.
3. *Inputs:* Role definitions, permission settings, user-role assignments.
4. *Outputs:* Updated role permissions, restricted/allowed access to system features.
5. *Success Criteria:* Users can only perform actions within their assigned role; unauthorized access is prevented; roles and permissions can be updated easily by the admin.

L. Media Handling (Photos & Video)

1. *Users:* All Listing Creators (Pet Owners, Rescuers, Shelter Admins)
2. *Description:* Allows users to upload images and videos for pet listings. Media is resized on the client side, thumbnails are generated automatically, and files are stored in cloud object storage with CDN for fast delivery.
3. *Inputs:* Image/video files, metadata (e.g., captions, descriptions).
4. *Outputs:* Stored media files, generated thumbnails, accessible URLs for listings.

5. *Success Criteria:* Media uploads succeed reliably, thumbnails display correctly, and content loads quickly via CDN.

M. Medical Records & Vaccination Tracking

1. *Users:* Shelter Admin, Pet Owner
2. *Description:* Allows shelter admins and pet owners to record and update each pet's medical history, including vaccination dates, deworming schedules, and spay/neuter status. The system provides reminders for upcoming vaccines, deworming, and medical follow-ups.
3. *Inputs:* Medical record details (vaccination type, date, next due date), deworming history, spay/neuter status, reminder schedules.
4. *Outputs:* Updated medical profile, vaccination/deworming schedule, follow-up reminders.
5. *Success Criteria:* Accurate tracking of medical status, upcoming treatments clearly displayed, and reminders sent on time to ensure pets stay healthy.

N. Ratings & Feedback

1. *Users:* Adopter, Pet Owner
2. *Description:* Allows adopters to provide ratings and feedback on the adoption process and communication with the pet owner/shelter after adoption. Pet owners can also rate the adopter's experience.
3. *Inputs:* Rating score, written feedback, optional attachments (e.g., pet's post-adoption photo).
4. *Outputs:* Stored ratings and feedback, average rating score displayed in user/adoption history.
5. *Success Criteria:* Feedback submitted successfully, ratings stored accurately, and reviews visible to relevant parties to improve trust and adoption processes.

O. Localization & Multi-language Support

1. *Users:* All Users
2. *Description:* Provides multi-language options for the user interface and

notifications. Supports locale-based formats such as date, time, currency, and measurement units. Users can select their preferred language and region settings.

3. *Inputs*: Language/locale selection, user profile preferences.
4. *Outputs*: Translated UI text, localized notifications, properly formatted dates/currencies.
5. *Success Criteria*: Users can switch languages easily, translations display correctly, and locale-based formats adapt according to user settings.

P. API Integration (Gmail)

1. *Users*: System, All Registered Users
2. *Description*: Integrates with Gmail API to send email notifications for account verification, adoption application updates, appointment confirmations, donation receipts, and reminders. Ensures reliable and secure email delivery.
3. *Inputs*: Email content, recipient address, subject line, attachments (optional).
4. *Outputs*: Sent emails (e.g., confirmation emails, reminders, receipts).
5. *Success Criteria*: Emails are delivered successfully to intended recipients, no sensitive data is exposed, and Gmail API integration remains secure and functional.

Q. Search Engine Optimization (SEO) & Social Sharing

1. *Users*: Guests (Public Visitors), Registered Users
2. *Description*: Ensures that all public pet listings and shelter profiles are optimized for search engines. Implements Open Graph and meta tags for better visibility on Google and proper previews when shared on social media like Facebook, Twitter, Instagram, Tiktok.
3. *Inputs*: Listing details (title, description, images, keywords).
4. *Outputs*: SEO-optimized listing pages, social media share previews (thumbnail, title, short description).
5. *Success Criteria*: Listings appear correctly in search engine results and

generate accurate previews when shared on social media platforms.

R. Analytics & Event Tracking

1. *Users*: Platform Admin
2. *Description*: Tracks key user interactions (e.g., page views, clicks, adoption applications, donations) on the web platform. Integrates with Google Analytics to provide detailed reports, traffic insights, and user behavior analysis for better decision-making.
1. *Inputs*: User activity data (views, clicks, form submissions, navigation paths).
2. *Outputs*: Analytics dashboards, usage reports, event logs.
3. *Success Criteria*: Events are captured accurately, reports generate actionable insights, and data supports product and system improvements.

3.2 Non-functional Requirements

1. **Performance & Scalability** - System response time: pages should load in < 2s under normal load; search queries return results < 1s for typical queries. - Scalability: support horizontal scaling for web/API and stateless services; database scaling (read-replicas). Target to support 100k monthly active users initially. Throughput: handle bursts (e.g., campaigns) with auto-scaling.
2. **Availability & Reliability** - Availability: 99.9% uptime target (SLA for core features). - Backup & Recovery: daily full backups, hourly incremental backups, 24-hour recovery point objective (RPO) and <4-hour recovery time objective (RTO) for critical data. - Monitoring & Alerts: health checks, metrics (CPU, memory, error rate), SLO monitoring, and alerting.
3. **Security & Privacy** - Transport encryption: HTTPS/TLS enforced for all endpoints. - Authentication: OAuth2 / OpenID Connect for social logins; strong password policies; optional 2FA. - Authorization: Role-based access control and least privilege. - Data protection: encrypt PII at rest (sensitive fields). Do not store raw

card info; integrate with PCI-compliant gateway. - Audit & Logging: retain logs for critical events (logins, moderation actions, payments) with tamper-resistant storage. - Compliance: GDPR-like privacy controls (consent, data export, right-to-forget) and local animal welfare regulations where applicable.

4. **Usability & Accessibility** - Responsive design for desktop, tablet, and mobile. - Accessibility: conform to WCAG 2.1 AA standards (alt text, keyboard nav, color contrast). - Internationalization: locale-specific date/ time and currency formatting.
5. **Maintainability & Extensibility** - Modular architecture with clear API boundaries; unit/integration tests coverage target (e.g., 70%+). - CI/CD pipelines for automated testing and deployment. - Clear documentation for APIs and system operations.
6. **Operational Requirements** - Support SLA for shelter partners (e.g., email support within 24 hours). Capacity planning and regular security/pen tests.
7. **Data Retention & Archival** - Keep adoption records for X years (configurable) for legal/audit needs; archived data stored cost-effectively.

3.3 External Interface Requirement

1. User Interfaces

- *Responsive Web UI*: Built with a modern framework (e.g., React), SEO-friendly with server-side rendering (SSR) for public pages.
- *Admin Console*: Separate interface with role-based modules for moderation, reporting, and organization management.
- *Mobile App (Optional/Future)*: Native or cross-platform (React Native/Flutter) with push notifications and offline caching.

2. Hardware Interfaces

- *Devices*: Smartphone cameras for photo/video upload; webcams for virtual meet-and-greets.
- *Storage*: Cloud object storage (S3-compatible) with CDN for fast media

delivery.

3. Software Interfaces / APIs

- *RESTful JSON API*: For client-server communication, supporting pagination, filtering, and rate limiting.
- *Third-party Integrations*:
 - Email Service: Gmail API for transactional emails (account verification, adoption updates, donation receipts).
 - Maps API: Google Maps or equivalent for shelter/pet location search.
 - Payments: Direct donations to shelters/organizations through integrated gateways (GCash, GoTyme, Maya, or credit/debit cards). All transactions are processed via *PCI-compliant* providers, and funds are transferred directly to the shelter's account—not through the platform.
 - Social Login: Google OAuth (email-based login using Gmail accounts).
 - Calendar: Google Calendar API for scheduling sync.

4. Communication Protocols & Data Formats

- Security: All communication secured via HTTPS/TLS 1.2+.
- Data Formats: REST JSON for APIs; multipart/form-data for media uploads.
- Real-time: WebSockets (with fallback to long-polling if needed) for chat and notifications.
- Email: Gmail API over secure protocols for transactional emails (account verification, adoption updates, receipts).
- *Authentication & Authorization Protocols*:
 - Email-based authentication (users sign up/login using verified email).
 - JWT tokens for secure session management (short-lived access tokens with long-lived refresh tokens).

4. System Models

4.1 Use Case Diagram

The Use Case Diagram illustrates the functional requirements of the system and how different types of users interact with it.

- Guest users can register and search for pets.
- Registered Users have access to profile management and communication features.
- Pet Owners, Shelters, and Rescuers can manage pet listings, track adoptions, and update pet information.

- Adopters can apply for adoptions, communicate with shelters/owners, and schedule appointments.
- Admins are responsible for content moderation, analytics, and overall system management.
- The Payment Processor handles donation transactions securely.
- The Gmail API is used for sending email notifications and updates.

This diagram provides a high-level overview of the system's functionality and the relationships between external actors and the system. It ensures that all stakeholders understand the scope of the system and validates that all critical user interactions are supported.

4.2 Entity Relationship Diagram(ERD)

The Entity Relationship Diagram (ERD) represents the logical structure of the Online Pet Adoption & Rehoming System database. It defines the entities, their attributes, and the relationships among them.

- User: Represents different system actors (adopters, pet owners, rescuers, admins).

Each user has attributes such as user ID, name, email, password, and role.

- Profile: Contains extended user information like bio and contact details. Each user has one profile.
- Pet: Stores details of pets available for adoption, including pet ID, name, type, breed, age, and status.
- Adoption: Tracks adoption requests and records, linking a pet with its adopter and adoption date.
- Shelter/Organization: Manages pet listings and provides shelter details such as name, location, and contact info.
- Donation: Captures donations made by users, including donation ID, amount, and date.
- Payment: Manages payment transactions related to donations, recording payment method and status.
- Notification: Stores system-generated alerts or reminders sent to users.

The ERD ensures a structured and normalized database design, enabling efficient data storage, consistency, and relationships between system actors and processes. It supports major system functions like pet management, user authentication, adoptions, and donations.

4.3 Data Flow Diagram (DFD) — Level 0

The Home4Pets Online Pet Adoption and Rehoming System utilized the Level 0 Data Flow Diagram (DFD) that provides a high-level overview of how the Home4Pets Online Adoption and Rehoming System interacts with its external entities. It represents the system as a single process and shows the flow of information between the system and the outside world.

Entities and Data Flows

- Pet Owner / Rescuer
 - Inputs: Pet details, listing information, medical records
 - Outputs: App updates, adoption request notifications, status updates
- Pet Adopters / Seekers
 - Inputs: Search queries, adoption applications, feedback
 - Outputs: Pet listings, application status, reminders
- Animal Shelter Organization
 - Inputs: Multiple pet listings, shelter information, adoption approvals
 - Outputs: Adoption applications, reports
- Administration
 - Inputs: Verification data, moderation actions, role assignments
 - Outputs: Reports, flagged content, analytics
- Visitor / Guest
 - Inputs: Pet search/browse requests
 - Outputs: Public pet listings
- Payment Processor (for Donations)
 - Inputs: Donation details, receipts
 - Outputs: Donation records, confirmation of payments
- External System – Gmail API
 - Inputs: Emails for verification, status updates, notifications
 - Outputs: Email requests for user verification, reminders, and updates

4.4 System Architecture(Layered)

Three-Tier Architecture

The Home4Pets Online Pet Adoption and Rehoming System is designed using a Three-Tier Architecture to ensure modularity, scalability, and maintainability. This architecture divides the system into three main layers—Presentation, Application, and Data—supported by external services (Side Layer).

1. Presentation Layer (Frontend)

Component: Web Browser

Role: Provides the user interface for different types of users (visitors, adopters, pet owners, shelters, and administrators). It manages user interactions such as pet searching, browsing listings, submitting applications, and managing accounts while ensuring a responsive and user-friendly experience.

2. Application Layer (Backend)

Components:

- User Profiles: Manages user accounts (adopters, owners, rescuers, shelters)
- Admin Panel: Provides administrative tools for verification, moderation, and role assignments
- Pet Listing: Handles creation, updating, and browsing of pet profiles

- Adoption Flow: Manages adoption applications, approvals, and status tracking
- Notifications: Sends updates and reminders (via email and in-app alerts)
- Reporting: Generates analytics, feedback summaries, and operational reports

Role: Acts as the business logic layer, processing requests from the frontend and connecting with the database and external services.

3. Data Layer (Database)

Components:

- SQL Database: Stores structured data such as user accounts, pet details, adoption applications, and donation records
- Cloud Media Storage: Stores multimedia files such as pet images and adoption documents

Role: Provides secure, reliable, and scalable storage to ensure data consistency and support backend queries.

4. Side Layer (External Services)

Components:

- Gmail API: For email notifications (verification, reminders, status updates)
- Payment Gateway: For secure processing of donations and payments
- Calendar API: For scheduling adoption appointments and reminders- Maps API: For locating nearby shelters or adopters
- Analytics Tools: For monitoring user behavior, adoption trends, and system performance

Role: Extends the system's functionality by integrating third-party services, improving communication and automation.

4.5 Sequence Example – Adoption Application

Actors and Components

1. Pet Adopter – Initiates the adoption request and checks the status.
2. UI (User Interface) – The frontend through which adopters interact with the system.
3. App Server – Processes adoption requests and manages communication with the database and external services.
4. Database – Stores adoption applications, updates, and records.
5. Gmail API – Sends email notifications regarding adoption requests and status updates.
6. Pet Owner – Reviews adoption requests and makes decisions.

Process Flow

1. The Pet Adopter searches for a pet through the UI.
2. The adopter submits an adoption application via the UI, which is sent to the App Server.
3. The App Server stores the application details in the Database.
4. The App Server also triggers the Gmail API to send an email notification to the Pet Owner about the new adoption request.
5. The Pet Owner receives the notification and reviews the request.
6. The owner's decision (approve/reject) is sent back through the App Server, updating the Database.
7. The system notifies the adopter of the decision by updating the UI and sending an email confirmation via the Gmail API.
8. The Pet Adopter can then check the status of their application at any time.
